Laundry Products Group

SUPER STAR PREMIUM STARCH

RELIABLE - works well on light and dark colors with No Highlighting!

- **Super Star** works the 1st. time - every time on all laundry fabrics in a wide range of temperatures - the perfect choice for linen, uniform, military, and shirt laundries.

EFFICIENT - Use less than other starches while producing a **superior stiffness!**

- **Super Star** disperses instantly and penetrates quickly to optimize absorption and eliminate highlighting. **Avoid costly reruns** and eliminate the need for cooking operations and multiple starches!

CONSISTENT- Specially formulated to eliminate most problems in today's starch operations.

- **Super Star** produces a feel and stiffness to meet your customer's needs and will allow you to produce a **"BULLETPROOF" stiffness on the first run.** Creates customer loyalty by giving superior results on every visit.

ECONOMICAL - **Competitively priced yet superior in quality** when compared to other products!

- **Super Star** will **save time** by getting it right the first time. and **save money** by eliminating the need for multiple starch operations or products. **Super Star** will also help fabrics stay clean longer by creating a soil resistant finish.

EASY - Designed to be the most consistent product in your washroom!

- **Super Star** is simply added dry to the wheel or in a washdown pocket with cold or warm water. The advanced formula eliminates the powdery mess typical with other dry starches to help keep your washroom clean.

Super Star is quickly being recognized as the 'New Standard in Premiums'

SUPER STAR

PREMIUM STARCH

TECHNICAL REPORT

USE SUGGESTIONS -

Super Star is specifically designed to work within the operation of your laundry. It can be added directly to the sour operation or in a separate operation after souring.

Super Star works great added dry to the wheel through the door, or it can be washed in through a supply pocket using warm or cold water with adequate pressure.

- Load should be soured to pH of 5.5 to 6.5
- Optimum water level is LOW, or 3 - 5 inches if level is programmable.
- Best temperature range is 90 to 110° F.
- Running time is normally 7 to 12 minutes depending on quantity used.

Average Usage Guide: (for **Medium** starch)

Classification	Dry weight per 50lb load*
Cotton flatwork	2 -3 ounces**
Shirts laundries	4 - 5 oz.
Jeans, military	6 - 8 oz.
All polyester / blends	8 - 10 oz.

* Load weight is based on clean, dry fabric weight

** Starch quantities expressed in actual dry ounces by weight. An 8 ounce liquid measure container only weighs approximately 4 ounces in dry weight. SUPER STAR has a lighter density than many starches.

Super Star is extremely efficient. Increasing quantities should not cause highlighting but will only result in increased stiffness. Amounts can be varied and should be adjusted to meet your particular customer's needs.

Your "BULLETPROOF" customers will especially appreciate this product!
